

Are solar mini-grids the future of rural electrification in Africa?

When combined with efficient and environmentally sustainable battery storage, solar mini-grids present a compelling economic case for rural communities in Africa. According to the International Energy Agency they are essential to future rural electrification in Africa. So what's stopping this from happening at the pace and scale needed?

Can solar mini grids solve Africa's energy access gap?

NAIROBI, February 27, 2023 - Solar mini grids can provide high-quality uninterrupted renewable electricity to underserved villages and communities across Sub-Saharan Africa and be the least-cost solution to close the energy access gap on the continent by 2030.

What is a standalone photovoltaic microgrid?

The design of a standalone photovoltaic microgrid is aimed to find the cheapest way to go for either a single rural house or a group of 200 rural houses with similar load demand as a long-term solution to their local energy challenges.

Could solar-powered mini-grids be the answer to rural access and dirty energy?

Yet 590 million people in Africa currently live without access to electricity, the majority in rural areas. These areas risk being left even further behind. Those who have access often rely on polluting, unreliable and costly diesel-powered generators. Solar-powered mini-grids could be the answer to rural access and dirty energy.

How many solar mini-grids are there in Sub-Saharan Africa?

The deployment of solar mini grids has markedly accelerated in Sub-Saharan Africa, from around 500 installed in 2010 to more than 3,000 installed today, and a further 9,000 planned for development over the next few years.

Is Africa ready for a solar mini grid?

"While Africa remains the least electrified continent, it also has the biggest potential for solar mini grid deployment," said Gabriela Elizondo Azuela, Manager of the World Bank's Energy Sector Management Assistance Program (ESMAP). "Solar mini grids can reach populations today that would otherwise wait years to be reached by the grid.
