

Alsym energy Djibouti

What makes alsym a good battery company?

Our team and partners are striving to make battery production simple, affordable, and sustainable for the long term. Mukesh Chatter is the President, CEO and co-founder of Alsym Energy, a battery technology company developing high-performance, low-cost batteries to enable a zero-carbon electrified future for all.

Is alsym energy flammable?

Alsym(TM) Energy has developed a high-performance, inherently non-flammable, non-toxic, non-lithium battery chemistry. It's a low-cost solution that supports a wide range of discharge durations.

Could alsym be a new energy storage platform?

A new platform for energy storage Although the batteries don't quite reach the energy density of lithium-ion batteries, Varanasi says Alsym is first among alternative chemistries at the system-level. He says 20-foot containers of Alsym's batteries can provide 1.7 megawatt hours of electricity.

Who is alsym energy COO Graeme?

Graeme is the COO at Alsym Energy. He is a serial C-suite entrepreneur with a track record of launching, scaling and guiding multiple start-ups to exits, and has a career-long focus on bringing disruptive solutions to industries undergoing massive change.

Explore Alsym Energy's nonflammable, sustainable batteries redefining energy storage for renewables, industry, and data centers worldwide. Discover how Alsym Energy's nonflammable, water-based batteries are transforming renewable energy storage and decarbonizing industries globally.

About Alsym Energy. Alsym(TM) Energy is a leading developer of advanced low-cost, high-performance rechargeable batteries made from readily available materials that are inherently...

Mike Hannon is CFO, Secretary and Treasurer at Alsym Energy, a battery technology company developing a new generation of high-performance, low-cost, non-flammable batteries to enable a zero-carbon electrified future for all.

The future of clean energy depends on economically viable, zero-carbon electrification, which requires a new approach to energy storage systems. You can make a direct impact by helping us build the world's first low-cost, high-performance, non ...

The significance of batteries in renewable energy systems goes beyond maintaining a steady power supply. Batteries serve as a catalyst for energy independence and decentralisation, empowering individuals and communities toward self-sufficiency by generating and storing their own energy.

Users can store and retrieve more energy efficiently, with fewer energy losses and reduced system wear over time. With round-trip efficiency (RTE) comparable to lithium-ion, systems with Alsym Green cost less to charge than other non-lithium options.
