How will solar PV power affect China's Grid-parity ambition?

Electricity generated by wind and solar PV will account for more than 60% of the total energy supply . In the era of grid-parity, along with China's 2030 carbon peak ambition, it is essential to conduct a holistic analysis of solar PV power from a macro view.

What are the advantages and disadvantages of solar PV power generation?

Although solar PV power generation has incomparable advantages over conventional fossil fuel energy, just like a coin has two sides, it has its shortcomings. The first is that solar PV power generation has the same characteristics as wind power such as intermittent, volatile, and random.

What factors affect the development of PV power generation in China?

On the basis of analysis of the four factors that impact the development of China's PV power generation, including solar-energy resources in China, PV industry conditions, research and development of solar-cell technology, and related PV policies, the prospects and development potential of PV power generation in China are discussed.

Can a realistic constraint predict solar PV power development path?

Several realistic constraints are set to predict solar PV power development path. The factors that may have potential impacts on the development path are analyzed. In recent years, China's solar photovoltaic (PV) power has developed rapidly and has been given priority in the national energy strategy.

Will China's solar PV industry survive a post-grid-parity era?

It is foreseeable that in the post-grid-parity era, for further optimization of cost and survival, China's solar PV industry will still maintain its enthusiasm for high intensity of investment in R&D. Figure 9. World record of conversion efficiency broken by Chinese solar PV companies (2013-2019).

What is the market potential of solar PV power in China?

The market potential of solar PV power in China reaches 1357GW. This is higher than the results in the early studies, which predicted that the potential cumulative installed capacity of solar PV power will reach 287.68GW in 2050.
