Internal Battery Management System. An internal BMS is integrated directly into the battery pack itself. This means the BMS is housed within the battery casing, where it seamlessly monitors the cells and manages their performance in real time. Advantages: This saves space, as there's no need for additional external components or wiring.

The EV Power LiFePO4 BMS consists of two parts: 1) Battery Control Unit (BCU) - one BCU per battery pack, monitors the battery voltage and the cell module loop and takes action to prevent charging or discharging if there is a fault. 2) Cell Modules - one per cell which can work as passive shunt balancers and link together via our proprietary one wire NC Loop to provide a ...
