

Will South Korea expand carbon-free energy supply?

South Korea's Ministry of Trade, Industry and Energy (MOTIE) announced plans to expand carbon-free energy (CFE) supply to boost export competitiveness and meet global carbon regulations.

Will Korea's energy transition go beyond the power sector?

The focus of Korea's energy transition must go beyond the power sector to target emissions from industry and transport, the IEA policy review says. The industrial sector is emissions-intensive and accounts for over half of Korea's final energy consumption despite the notable improvement in energy efficiency over the last decade.

Does the CFE initiative address South Korea's energy transition needs?

However, given South Korea's limited targets and significant infrastructure and financial challenges in transitioning to clean energy, it remains to be seen if the CFE Initiative may sufficiently address the country's energy transition needs or protect its economic competitiveness and international standing.

How does Korea's energy transition work?

This closely links Korea's energy transition to efforts to spur investments in energy storage systems, smart grids and intelligent transport systems. "Korea can draw on its technological expertise by addressing regulatory and institutional barriers in its energy markets and by fostering more active consumer engagement," Dr Birol said.

Which countries collaborate with South Korea for green energy research?

India is South Korea's leading collaborator for green energy research, with more than 13% of the collaboration share. Combined with the United States and China, these three countries account for almost a third of South Korea's green energy research collaboration.

Does South Korea have a green energy policy?

However, it is notable that large South Korean corporate buyers such as Samsung Electronics and Hyundai Motor Company have recently committed to procuring 100% of their electricity needs from renewable energy. South Korea ranks sixth globally for green energy research output, behind China, the United States, India, the United Kingdom and Germany.

South Korea's regional landscape is undergoing a quiet but transformative shift. In a nation where the Greater Seoul Capital Area dominates both economically and demographically, smaller cities and rural regions face mounting challenges such as population decline, aging communities, and stagnant local economies. While these issues have long been ...

According to a government proposal published in 2022, South Korea plans to substantially increase its renewable energy capacity by the late next decade. The strategy aims to boost the share of renewables in the
