

What is a distribution network operator (DNO)?

Electricity distribution network operators (DNOs) or independent distribution network operators (IDNOs) own and operate these networks. These companies are required by law to offer connection services to anyone who asks. A well-functioning market for connections to the distribution network will benefit us all.

Who owns the electricity distribution network?

2.1. Most of the electricity distribution network is built, owned and operated by regional monopolies known as distribution network operators (DNOs). Independent distribution network operators (IDNOs) also build and own parts of the network. These companies are licensed by us to carry out their activities.

How does a distribution network work?

Smaller sources of generation and flexibility, such as solar and batteries, also connect to the distribution network. The owners of each part of the distribution network are regulated by Ofgem, which sets the outcomes that must be delivered and the revenues that may be collected. The Commission

How much investment does the UK need to meet net zero?

But the large investments required, more than the £150bn the Energy Networks Association estimates has been spent since privatisation of the system in 1990, underline the challenge for the companies that own and run those networks. For the UK to meet its net zero target by 2050 an additional £100bn to £140bn of investment may be required

Why do we need a well-functioning distribution network?

A well-functioning market for connections to the distribution network will benefit us all. Timely and cost-effective connections enable economic growth and help to decarbonise the energy we use. We make sure customers, those already connected and new connections, receive good service at a fair price. Getting the best quality of service ...

Why do you need a distribution network operator?

However, working with an experienced energy broker can help optimize other aspects of your energy costs. In conclusion, Distribution Network Operators are central to the UK's energy ecosystem, affecting everything from the reliability of energy supply to the costs and sustainability efforts of businesses.
