

Why do we use elestor flow batteries?

The technology is affordable and easy to scale, which means we can speed up the spread of Elestor flow batteries to store large volumes of electricity over long durations. Find out why we dedicate our lives to a sustainable future and discover how we help shape a new, clean energy system that will improve everyone's lives.

How does elestor reshape the world of batteries?

Elestor reshapes the world of batteries in ways that promise to transform the entire energy system. "We will soon see the emergence of entirely new power plants with hydrogen bromine flow batteries at their heart," says Wiebrand Kout, Chief Technology Officer.

Do elestor flow batteries need to be square or cylindrical?

There is no particular need for Elestor's flow batteries to be either square or cylindrical, which are common formats for conventional batteries. Indeed, the hydrogen and the bromine can be stored in enormous tanks, including in tanks previously used to store other chemicals.

What will elestor do with its funds?

It will use the funds to further develop its hydrogen bromide (HBr) flow battery technology for renewable energy storage. The company plans to build a gigawatt-scale production facility at an unspecified location. "We are also building the first commercial system as we speak," said Elestor CEO Guido Dalessi.

What is elestor technology?

As such, the Elestor technology bridges the two worlds of energy storage: with batteries and in the form of hydrogen. Cost reduction and revenue opportunities also arise as a result of renewable energy's reliance on sunshine and wind.

What is elestor's solution?

Elestor's solution emerged from Kout's original and since patented invention. He began developing it about a decade ago, when he started searching for answers to questions that were rarely asked. "Change starts in the mind. As we question and challenge conventions, we think of ways to solve both existing and new challenges," said Kout.

That's why it has Elestor developing a unique, patented hydrogen bromine flow battery to store electricity as modules. The battery utilises low-cost, abundant materials (bromine and hydrogen). Elestor is also currently ...

This is why Kout and team have developed a novel flow battery system that can connect seamlessly into renewable energy systems to provide storage of this valuable electrical power. Using a bromine and hydrogen chemical reaction within a membrane stack, flow batteries can produce mass capacity and mass output, with little or no degradation.

Elestor's battery uses two tanks of hydrogen and dissolved bromine to store energy, both of which are cheap and plentiful compared to the rare metals lithium ion cells rely on. Because it is a flow battery, capacity can be boosted by simply increasing the size of the vessels, making it ideal for mass storage of electricity. ...

The system is completely closed and works as any normal battery, with + and - poles for DC power connection to charge and discharge. And, like with any normal battery, nothing goes in or out - except electricity. The required low storage cost per MWh is achieved with Elestor's patented hydrogen bromine (HBr) flow battery technology.

After years of research and development, Elestor is at the verge of introducing its revolutionary hydrogen bromine flow battery to the market. This technology is a next step in low cost electricity storage at scale. Elestor's breakthrough flow battery stores electricity safely and affordably. Unlike conventional batteries, it can do this for days rather than just hours. And, crucially, it does so at highly competitive levelized costs. "Cutting the cost of electricity storage is our mission," says Dalessi. "Only the storage technology that offers ...

Elestor's flow battery is incredibly flexible and easy to scale, not only because hydrogen and bromine are abundant materials all over the world. To increase your power, expressed in megawatt, simply install additional membrane stacks. Similarly, expanding the electrolyte and hydrogen tanks enables you to increase your capacity, expressed in ...
