What is an energy storage roadmap?

This roadmap provides necessary information to support owners, operators, and developers of energy storage in proactively designing, building, operating, and maintaining these systems to minimize fire risk and ensure the safety of the public, operators, and environment.

What is battery energy storage fire prevention & mitigation?

In 2019, EPRI began the Battery Energy Storage Fire Prevention and Mitigation - Phase I research project, convened a group of experts, and conducted a series of energy storage site surveys and industry workshops to identify critical research and development (R&D) needs regarding battery safety.

Where can I find information on energy storage failures?

For up-to-date public data on energy storage failures, see the EPRI BESS Failure Event Database.² The Energy Storage Integration Council (ESIC) Energy Storage Reference Fire Hazard Mitigation Analysis (ESIC Reference HMA),³ illustrates the complexity of achieving safe storage systems.

What is the NFPA 855 standard for stationary energy storage systems?

Setting up minimum separation from walls, openings, and other structural elements. The National Fire Protection Association NFPA 855 Standard for the Installation of Stationary Energy Storage Systems provides the minimum requirements for mitigating hazards associated with ESS of different battery types.

What is a battery energy storage system?

1. Introduction A battery energy storage system (BESS) is a type of system that uses an arrangement of batteries and other electrical equipment to store electrical energy. BESS have been increasingly used in residential, commercial, industrial, and utility applications for peak shaving or grid support.

What is DS 532 data center & related facilities?

DS 5-32 Data Centers and Related Facilities includes recommendations for the protection of data center equipment using Li-ion batteries in battery back-up units (BBU), uninterruptible power supplies (UPS), and energy storage systems (ESS) with a maximum capacity of 20 kWh per rack.
