

Etmt energy Philippines

What is ETM & how does it work in the Philippines?

The Government of the Philippines recently announced plans to place a moratorium on new coal-fired power plants. ETM is a transformative, blended-finance approach that seeks to retire existing coal-fired power plants on an accelerated schedule and replace them with clean power capacity.

How will ETM benefit Indonesia and the Philippines?

During the 2- to 3-year pilot phase,ETM will raise the financial resources required to accelerate the retirement of five to seven coal plants in Indonesia and the Philippines,while facilitating investment in alternative clean energy optionswithin these countries.

Why is energy transition important in the Philippines?

Conclusion The energy transition in the Philippines is key to achieving global sustainable developmentby addressing the energy trilemma of security,equity,and environmental impact. The current electricity supply mix in the Philippines is dominated by fossil fuels,which poses challenges to the climate and atmosphere.

What is the umbrella policy support for energy transition in the Philippines?

Policy implications The umbrella policy support for energy transition in the Philippines is the Republic Act (RA) 9513or the Renewable Energy Act of 2008 (Republic Act No,2008),(Department of Energy (DOE),2009).

What is the ADB ETM & how does it work?

He added that the ETM is the ADB's way for the said countries tohelp them achieve a common objectivein a manner consistent with their respective development trajectory and objectives. The ETM,Saeed explained,will be composed of two funds -- one for carbon reduction,the other for clean energy.

What is the current electricity supply mix in the Philippines?

The current electricity supply mix in the Philippines is dominated by fossil fuels,which poses challenges to the climate and atmosphere. Therefore,it is encouraged to increase the share of RE sources,particularly solar and wind energy,in the electricity supply mix.

The Philippines will pilot the Energy Transition Mechanism (ETM) project in Mindanao, where the Agus-Pulangi hydropower plants will be rehabilitated and expanded to enable the early retirement of coal-fired power plants.
