

What is Echandia battery system?

Echandia battery systems is a lithium-ion based heavy-duty system designed and certified for tough maritime use. Minimize emissions. And operational costs. Maritime battery systems can be used for electric propulsion or hybridization. The Echandia battery platform is a heavy-duty ESS designed and built for maritime requirements.

Are Echandia batteries lighter?

Our battery systems can be up to 50% lighter and significantly smaller than most alternatives. This is possible because our systems require less oversizing to meet the energy requirement. Offering both power and safety, the Echandia battery system is built for heavy-duty applications and certified for maritime use.

How long does it take Echandia to charge a battery?

In 2020 Echandia will launch a breakthrough 6c system that will allow us to fully charge a battery system in less than 10 minutes. Our Products LET'S CONNECT

Swedish maritime battery system supplier Echandia has received an order to deliver battery systems to a Northern European ferry operator. Courtesy of Echandia. The order involves converting two roll-on/roll-off passenger (RoPax) ferries to pure electric propulsion. Delivery is planned for the second half of 2025.

In the past, Echandia have successfully delivered battery systems to the tugboat market and commuter passenger ferries, like the ones in Copenhagen and Kochi, India for example. The contract for the new Molslinjen ferries represents a significant step for Echandia into the market segment for larger RoRo and RoPax ferries.

Echandia, the leading Swedish supplier of safer maritime battery systems, has launched its innovative battery dimensioning tool, WattWizzard. ... By entering the vessel's data and operational profile, customers receive a tailored estimate of the Echandia battery system best suited for their vessel. This early insight into the size and weight ...

Echandia's battery system was chosen by Molslinjen because of its lower total cost of ownership, safety features and low weight. The vessels will be prepared to sail autonomously between ports and will also benefit from automatic docking and charging technology at quay. With an energy storage of 3.1MWh and 3.8MWh respectively, each ferry ...

The battery systems from Echandia will provide blackout prevention, spinning reserve and peak-shaving, greatly reducing fuel cost and port emissions while maintaining the industry's highest safety standards. "We are delighted to have been chosen for this important project. The exceptional safety features and extended lifespan, offering ...

And battery compartments, ventilation and isolation must follow strict class rules to make sure external factors cannot impact battery modules and cells. But obviously, if a battery is inherently safe - i.e., have a close to zero risk of erupting fires or explosions, that is the best way to steer clear of catastrophic events.

Echandia predicts that the battery-powered catamaran will abate 2,000 tons of CO₂ each year. With a capacity of 147 passengers and 28 bikes, the vessel's expected usage will be 0.2kWh per nautical mile, per ...

Swedish maritime battery system supplier Echandia has been selected to supply maritime battery systems for San Francisco Bay Ferry's Rapid Electric Emission Free (REEF) ferry program. Illustration. MV Delphinus, the ...

Echandia's expertise in battery technology was decisive. Press-Release-Tug-Boats. World's Largest Ferry Fleet. Swedish energy systems supplier Echandia has landed the battery contract for the world's largest fleet of electric ferries, and India's first water metro service. The 24m ferries will be fast-charged at regular intervals ...

Echandia will begin producing its advanced Lithium Titanium Ion battery system, the safest, most resilient, and longest-lasting maritime battery system on the market. "We are on the cusp of a significant transformation in the North American marine market as it readies to fully embrace marine grade energy storage onboard", says Trevor Small ...

Echandia's LTO-battery system provides more power than conventional batteries, reducing the charging time to 10 minutes for a one-hour run time. The project took 2 years from start to finish and the supercharged ferry was put into traffic in Stockholm summer of 2019.

Echandia Selected to Provide Maritime Battery Systems for San Francisco Bay Ferry's Rapid Electric Emission Free (REEF) Ferry Program. News ; 9 August 2024 ; Echandia, the leading Swedish supplier of safe maritime battery systems, has been selected to supply maritime battery systems for San Francisco Bay Ferry's Rapid Electric Emission Free ...

Echandia, to supply maritime battery systems for San Francisco Bay Ferry's Rapid Electric Emission Free (REEF) Ferry Program. Saturday, November 30, 2024 ... France's First Hydrogen-Electric Fishing Training Vessel. 29/11/2024. Biofuel Auramarine to Deliver Advanced Fuel Supply Systems for Ecotrader ships.

"This order once again demonstrates the recognition of Echandia's battery systems within the maritime market, particularly in Denmark. Following the successful deployment of harbour buses in Copenhagen in 2020 ...

Echandia's lithium-ion battery systems power everything from tugboats to hybrid-electric and electric ferries in Europe, New Zealand and India. In Copenhagen, Echandia's batteries power a ...

France echandia battery

Swedish maritime battery system supplier Echandia has secured an order for battery systems which will be installed on four vessels with hybrid propulsion. Echandia. As disclosed, these battery systems are intended for installation in a total of four vessels scheduled for production starting in 2024.
