Could fusion energy be a major contributor to future electric power systems?

Cambridge, MA, September 12, 2024 -- The MIT Energy Initiative, in collaboration with the MIT Plasma Science and Fusion Center, has released a new report that shows that fusion energy could be a major contributor in future electric power systems and identifies what is required to achieve that potential.

What is the future of fusion?

Experts in energy systems modeling and fusion technology explore the future role of fusion at various costs and carbon constraints. For many decades, fusion has been touted as the ultimate source of abundant, clean electricity.

What is fusion energy?

Fusion is potentially one of these technologies. Fusion energy, also known as controlled nuclear fusion, has been pursued since the 1950s, first as a classified program and then, since a landmark conference in 1958, as an open, collaborative international effort.

Can fusion energy be used as a fuel?

Once developed, first-generation fusion plants may likely use a combination of abundant deuterium (an isotope of hydrogen) and lithium as fuel. Commercial fusion energy has the potential to revolutionize the energy industry, help to achieve energy abundance and security, and help meet growing clean energy needs of the U.S. and the world.

How is fusion energy released?

This plasma is then heated to about 100 million degrees and fusion energy is released. Fusion reactions, unlike the chemical reactions from burning coal or natural gas, do not release any of the greenhouse gases that are causing climate change.

How will fusion technology help commercial fusion energy facilities?

Fusion devices need to manage temperatures hotter than the centre of the Sun metres away from ultra-low temperature cooling systems. Therefore, a tenfold reduction of heat represents a big step in developing technology that will allow commercial fusion energy facilities.

For example, in the autumn of 2021, the United Kingdom, which seeks to make fusion a part of its national decarbonization plans, embarked on an effort to develop a made-for-fusion licensing framework. 8 Towards ...
