

What type of energy is used in Greece?

Energy in Greece is dominated by fossil gas and oil. Electricity generation is dominated by the one third state owned Public Power Corporation (known mostly by its acronym ΔΕΗ, or in English DEI). In 2009 DEI supplied for 85.6% of all electric energy demand in Greece, while the number fell to 77.3% in 2010.

Who generates electricity in Greece?

Electricity generation is dominated by the one third state owned Public Power Corporation (known mostly by its acronym ΔΕΗ, or in English DEI). In 2009 DEI supplied for 85.6% of all electric energy demand in Greece, while the number fell to 77.3% in 2010. Almost half (48%) of DEI's power output in 2010 was generated using lignite.

What are Greece's energy and climate policies?

Greece's energy and climate policies are centred on achieving net zero emissions by 2050 while ensuring energy security, improving economic competitiveness and protecting vulnerable consumers.

How is Greece making progress on its energy transition?

Greece is making progress on its energy transition, including implementing reforms to standardise and simplify licensing procedures for renewable projects and investigating options for offshore wind.

Does Greece have a good energy policy?

Greece has also made strong progress on renewable energy, which covered 20% of its total final energy consumption in 2021. Following Russia's invasion of Ukraine, Greece is reducing its reliance on Russian energy imports and ensuring secure access to energy by diversifying its supply and increasing domestic energy production.

Does Greece's Energy Community pay off?

So far, no energy community in Greece has seen its investment pay off. The country's virtual net-metering system means that the grid operator calculates the energy that a household or business uses and the energy the community produces with its renewables technology. The community is then paid the difference -- at least in theory.

The test of the "Ai Stratis Green Island" program was successfully carried out last Saturday, DEDDIE said, when for 2.5 hours Ai Stratis became Greece's first green, fully energy-autonomous island.

Fossil fuels still account for most of Greece's energy use and stronger efforts are needed on energy efficiency. In this report, the IEA provides a range of energy policy recommendations to help Greece smoothly manage its ...
