

Renewable energy in Greece accounted for 29 percent of its electricity from renewable sources in 2021. By 2030, renewables are expected to have a capacity of 28GW, and exceed 61 percent of Greece's electricity consumption. [1]

developing areas. Energy self-sufficiency has been defined as total primary energy production divided by total primary energy supply. Energy trade includes all commodities in Chapter 27 of the Harmonised System (HS). Capacity utilisation is calculated as annual generation divided by year-end capacity x 8,760h/year. Avoided

Greece: Many of us want an overview of how much energy our country consumes, where it comes from, and if we're making progress on decarbonizing our energy mix. This page provides the data for your chosen country across all of the key metrics on this topic.

2023 marked a historic milestone in Greece's clean energy production, with 57% of the energy mix being supplied by Renewable Energy Sources (wind and solar) and hydroelectric units, surpassing 25 TWh. In 2022, the corresponding percentage was 50.12%.

4 ????&#0183; Athens, Greece--Amazon has announced a significant investment in three new utility-scale wind farms in Greece, marking its largest renewable energy deal to date. This move aligns with Amazon's commitment to achieving net-zero carbon across its operations by 2040 and supports Greece's goal of transitioning to a more sustainable energy future.

Greece has also made strong progress on renewable energy, which covered 20% of its total final energy consumption in 2021. Following Russia's invasion of Ukraine, Greece is reducing its reliance on Russian energy imports and ensuring secure access to energy by diversifying its supply and increasing domestic energy production.

By 2030, renewables are expected to have a capacity of 28GW, and exceed 61 percent of Greece's electricity consumption. This is a significant increase from 8% of the country's total energy consumption in 2008. By 2022, Greece occasionally reached 100% renewables for a few hours. The target for 2050 is a capacity of 65GW.

The Integrated National Energy and Climate Plan for Greece for the period 2021-2030 aims to increase the overall share of renewable energy sources (RES) in its gross final energy consumption to 35% by 2030. In the electricity sector, the share of ...
