

How do Hawker Aircraft batteries work?

Vent tubes attached to the battery's case allow venting to take place. A main connector on the front of the battery container connects it to the aircraft's electrical system. Hawker sealed lead acid aircraft batteries comply with the highest requirements of airworthiness as set out by EASA, FAA, OEM's and Ministries of Defence.

Are Hawker batteries maintenance free?

The cells have an enhanced capacity compared to most other maintenance free batteries on the market. In combination with the high frequency Hawker Life plus allowing a short charging time in 8 hours at 60% DOD and in 12 hours at 80% DOD, the full benefit of its high performance can be used in an optimised way.

What is Hawker's evolution?

The Hawker's evolution is a new valve regulated gas recombination battery with gelled electrolyte, accepting up to 80% DOD/C5. This range is suitable for use in materials handling equipment in low to medium duty applications. The cells have an enhanced capacity compared to most other maintenance free batteries on the market.

What is a Hawker evolution battery?

The Hawker evolution battery range is available in DIN and BS dimensions. It meets the dimensions of the standards DIN/EN 60254-2 and IEC 60254-2. The gelled electrolyte of the Hawker evolution battery is based on a highly dispersed mixture of sulphuric acid, water and silica.

What is a Hawker sealed lead acid battery?

Hawker sealed lead acid batteries consist of two 12 Volt monoblocs housed inside a battery case. The battery case is manufactured either using stainless steel or glass reinforced plastic. The two monoblocs are connected in series and to the main connector using highly conductive electrolytic copper tinned laminations.
