And the cooling fan is controlled in 9 steps to maintain the normal temperature of high voltage battery system. The air-cooling method is applied in the cooling system where indoor air is used to cool down the high voltage battery pack assembly.

passive cooling is possible. The system "uses" the slightly lower outside temperature for energy-saving battery cooling. 2. If the ambient temperature is too high for passive cooling, the system automatically switches to an active coolant circuit. 3. If energy is needed for heating the batteries, the electric heater feeds the necessary heat to

Section 10.2 gives a more detailed overview of HV battery packs for electric road vehicles and introduces the individual components, such as the battery modules, the battery management system (BMS), the cooling and heating system, as well as the battery housing. The requirements that the components have to fulfill are defined by the vehicle and ...
