

## How to adjust the length of photovoltaic panel purlins

How do you dimension a purlin?

The preferred method of dimensioning is hole centre to hole centrerather than referenced from one end. An overall purlin length is also desirable to provide a data entry dimension check. Stramit normally supply purlins and girts punched to conventional AISC hole centres.

#### How should a purlin flange be connected?

Any such loadings must be connected to the purlin web by using hangersor other means. Never attach loads to the purlin lips. Attachments to the purlin flange must be within 25mm of the web. Connection design should follow the rules within AS/NZS4600,including a check on bearing of the purlin. Loads should not be suspended from wall girts.

#### Why do solar panels have a tilt angle?

Conventionally, the solar modules are arranged such that, they receive the maximum solar radiation. It has been observed that, at many locations, the tilt angle is not kept constant for all the solar arrays or it is varied due to improper structural framing system, uneven ground conditions and defects in the foundations.

#### How to install solar PV MMS?

The civil works in the installation of solar PV MMS are relatively straightforward which involves following major steps from the civil engineering point of view. Assembly and fixing of supporting steel structure. Mounting of Solar Modules on the Support Structure.

## Why is lateral load a limiting factor in solar panel installation?

d at the highest elevation of the structure and subjected to wind load. The solar panel mounting system's lateral load carrying capacity is often the limiting factor in the mounting system design and the wind forces are often responsible for generating the lateral loads in case of solar panel installation. The diagr ro f of the

## What is the bolt strength of a roof purlin?

The bolt strength grade (4.6 or 8.8) should be specified by the design engineer to conform with the Stramit® Purlins,Girts &Bridging - Product Technical Manual. Loads to be suspended from roof purlins must be accounted for in design. No allowance is included in the capacity tables.
