

How to disassemble the new energy storage battery shell

Why is disassembly of lithium-ion batteries so difficult?

The disassembly of lithium-ion battery systems from automotive applications is a complex and therefore time and cost consuming process due to a wide variety of the battery designs, flexible components like cables, and potential dangers caused by high voltage and the chemicals contained in the battery cells.

How do you disassemble a lithium-ion battery pack?

When breaking down a lithium-ion battery pack, having the right tools for the job is critical. The tools you use to disassemble a lithium-ion battery pack can be the difference between salvaging a bunch of great cells and starting a fire. 5 pack of flush cut pliers. Perfect for removing the nickel strip that is attached to cells when salvaging.

Can a planning approach be used for the disassembly of electric vehicle batteries?

5. Conclusions Using the example of the Audi Q5 Hybrid battery system, a planning approach for the disassembly of electric vehicle batteries has been demonstrated. Based on a priority matrix, a disassembly sequence for the Q5 battery system has been derived.

Can a battery pack be disassembled?

Current battery packs are not designed to be disassembled, spaces between modules are narrow, and joint technologies are mostly irreversible (e.g., glued parts, welded plates, one-way screws), bringing to a difficult non-destructive disassembly.

How do I dismantle a Li-ion battery?

The first step to take before dismantling a Li-ion battery is to identify its type and the amount of charge remaining in it. This information is critical because different types of batteries require different handling procedures. Additionally, the risks associated with dismantling the battery increase with the charge level.

What happens if a LiB battery is disassembled?

As reported in , even using modules with a limited residual charge, thermal runaway, with gas emission, is possible in case of short circuits that can easily happen during the disassembly. The gas mixture released from LiB can create an ATEX zone around the battery pack.
