

What is smart grid Ireland?

Smart Grid Ireland's industry and utility network members respond to the challenges of the energy transition towards a Net Zero carbon energy grid and network modernisation through innovation, enabling intelligent and efficient management of Ireland's energy networks

What is a microgrid and how does it work?

A microgrid is a group of interconnected loads and distributed energy resources within clearly defined electrical boundaries that acts as a single controllable entity with respect to the grid and that connects and disconnects from such grid to enable it to operate in both grid-connected or 'island' mode.

What does EirGrid mean for Ireland?

EirGrid was asked by the Government to transform the electricity system in anticipation of a future without coal, oil, peat and ultimately one with net zero emissions. Specifically, EirGrid is to redevelop the grid to manage the vast majority of Ireland's electricity coming from renewable sources by 2030.

Can EirGrid develop offshore wind?

However, EirGrid has assumed limited capacity for offshore wind development off the south and west coast. Offshore wind development in the short term remains to be predominantly focused on the east coast.

In Ireland, the final roadmap includes an additional 1.3GW of new onshore renewable electricity on 2020 levels. There will also be significant growth in solar power. On top of the 500MW of microgeneration, EirGrid is planning ...

Microgrids are self-sufficient energy ecosystems designed to tackle the energy challenges of the 21st century. A microgrid is a controllable local energy grid that serves a discrete geographic footprint such as a college campus, hospital complex, business center, or ...

Authors: Dr Maria Brucoli, and Kevin O'Halloran, Arup A microgrid is a cluster of loads and localised distributed generation and storage sources operating as a single controllable unit. Usually, a microgrid is a small part of the medium- or low-voltage distribution network, where the power and, sometimes, the heat demand are supplied by local energy sources (e.g. ...
