

Japan's solar power generation

What percentage of Japan's Energy is solar?

In 2022, solar energy accounted for 5.39% of Japan's total energy mix and 9.91% of its electricity generation. In both cases, solar power in Japan holds the largest share of all renewable sources. This is a drastic contrast to even a decade ago when solar energy contributed less than 1% of the country's energy.

Why is solar power growing in Japan?

The steady growth of solar power in Japan is attributed to several factors, including the country's focus on energy security, economic efficiency and environmental sustainability. Post-Fukushima, there was a national reevaluation of energy sources.

Is solar energy the future of Japan's Energy Strategy?

Solar energy in Japan is emerging as a cornerstone of Japan's strategy to meet its ambitious long-term sustainability goals. The Sixth Strategic Energy Plan aims for carbon neutrality by 2050 with an interim goal of 36-38% of energy from renewables by 2030.

Who makes solar power in Japan?

In line with the significant rise in installations and capacity, solar power accounted for 9.9% of Japan's national electricity generation in 2022, up from 0.3% in 2010. Japanese manufacturers and exporters of photovoltaics include Kyocera, Mitsubishi Electric, Mitsubishi Heavy Industries, Sanyo, Sharp Solar, Solar Frontier, and Toshiba.

How much solar energy does Japan need in 2022?

This is a drastic contrast to even a decade ago when solar energy contributed less than 1% of the country's energy. In total, solar energy in Japan grew from 11.05 TWh in 2010 to over 260 TWh in 2022. However, even with this shift, the country must dramatically increase its solar energy infrastructure to meet its 2030 and 2050 targets.

Does Japan need solar energy?

This will need to dramatically increase for Japan to stay aligned with its renewable energy and decarbonisation goals. Solar energy in Japan is emerging as a cornerstone of Japan's strategy to meet its ambitious long-term sustainability goals.

Share of renewables to electricity generated in Japan. The percentage of total electricity generated in Japan are estimated including on-site consumption by power source in 2021 based on Electricity Survey Statistics ...

It has now become cost-competitive with other sources of power generation. Japan's percentage of electricity generated by renewables in total power generation increased from 10% in FY2011 to 18% in FY2019 ...

Japan's solar power generation

In 2022, solar energy accounted for 5.39% of Japan's total energy mix and 9.91% of its electricity generation. In both cases, solar power in Japan holds the largest share of all renewable sources. This is a drastic ...

Share of renewables to electricity generated in Japan. The percentage of total electricity generated in Japan (including on-site consumption) by power source in 2023 was estimated from the Electricity Survey Statistics ...

OverviewSolar manufacturing industryGovernment actionSee alsoExternal linksSolar power in Japan has been expanding since the late 1990s. The country is a major manufacturer and exporter of photovoltaics (PV) and a large installer of domestic PV systems, with most of them grid connected. Solar power has become an important national priority since the country's shift in policies toward renewable energy after the Fukushima Daiichi nuclear disaster in ...

This report is the follow-up to a report we published in 2019, "Solar Power Generation Costs in Japan: Current Status and Future Outlook" (the "2019 report"), and it analyzes the most recent ...

Solutions are emerging to conquer solar power's shortcomings, namely, limited installation sites and low-capacity utilization rates. Japan is spearheading the development of two promising ...
