

Energy resources are a major concern for Jordan government to cover the growing demand on energy, especially electricity. Fig. 1 shows the historical electricity production in Jordan with the expected need in 2025, the figure clearly shows the increasing demand on electricity. Today Jordan using every possible source of energy to produce electricity focusing ...

A global energy company. We work to be leaders. To transform the world. We want to lead decarbonization and be 100% green by 2030. But our commitment is not only with planet earth. We want to make a difference for both environment and the people. We are changing tomorrow now. Energy transition.

This initiative aligns with Jordan's strategic vision of fostering a low-carbon economy and expanding the country's capabilities in renewable energy production. By harnessing Jordan's abundant solar resources, the project will significantly contribute to global efforts in reducing carbon emissions and promoting sustainable industrial development.

Overview. Jordan is one of the leading countries in the region in renewable energy (RE) adoption and clean energy growth. Solar or wind energy powers approximately 29 percent of the electricity grid and Jordan aims to reach 50 percent of electricity from renewables by 2030 through a focus on smart grid development and energy storage projects.

We support companies and countries to reduce emissions across the energy landscape - for a more reliable, affordable and sustainable energy system. Learn more Working with us. Our people make the difference. They connect, create, and keep us on track toward changing the world's energy systems.
