Energy in Kazakhstan describes energy and electricity production, consumption and import in Kazakhstan and the politics of Kazakhstan related to energy. Kazakhstan is net energy exporter. Kazakhstan has oil, gas, coal and uranium reserves. Kazakhstan is a leading energy producer in the Commonwealth of Independent States (CIS).

Is Kazakhstan at a crossroads in its energy sector?

Kazakhstan, a vast and resource-rich nation in Central Asia, is at a crossroads in its energy sector. With a growing emphasis on sustainability and a need to align with global decarbonization efforts, the country is embarking on a transformative initiative that aims to ensure the security and reliability of its energy supply.

Is Kazakhstan a net energy exporter?

Kazakhstan is net energy exporter. Kazakhstan has oil, gas, coal and uranium reserves. Kazakhstan is a leading energy producer in the Commonwealth of Independent States (CIS). It is a major producer of oil, gas, and coal, as well as being the largest producer and exporter of uranium ore in the world.

Are energy prices a social concern in Kazakhstan?

The report recognises that energy prices are a significant social concern in Kazakhstan. A rise in prices for liquefied gas used in vehicles contributed to the unrest that gripped the country in January 2022. However, low prices have made it difficult to diversify the types of energy used for the domestic market and to promote energy efficiency.

Does Kazakhstan need more energy?

As Kazakhstan expands renewables, more investment will be needed in flexible capacity such as gas-fired and hydro power plants to accommodate the variability of solar and wind output, the report says. Kazakhstan's system currently relies significantly on electricity imports from Russia to cover imbalances and maintain frequency stability.

What is Kazakhstan's energy mix?

Coal represents around half of Kazakhstan's energy mix (50% in 2018), followed by oil and natural gas (both with 25% shares). Coal is mostly transformed into electricity and heat before reaching the final consumer. Coal fuels around 70% of electricity generation (in 2018), followed by natural gas (20% in 2018).
