

Libya energy dom

What is energy in Libya?

Energy in Libya primarily revolves around the production, consumption, import, and export of energy, with a significant focus on the petroleum industry, which serves as the backbone of the Libyan economy.

What is Libya's energy supply based on?

Furthermore, in 2020, the combined revenues from oil and natural gas exports constituted approximately 73% of Libya's total export value. In 2020, the total energy supply (TES) primarily came from oil and gas, which contributed 53% and 43%, respectively, while renewables accounted for approximately 4%.

What is bioenergy in Libya?

Bioenergy comprised 100% of the renewable energy supply. Oil is the major natural resource of Libya, with estimated reserves of 43.6 billion barrels. Libya is a member of OPEC.

Why is Libyan natural gas important for European energy security?

Libyan natural gas is crucial for European energy security, particularly for Italy, which sourced 4% of its natural gas imports from Libya in 2023 via the Greenstream pipeline. This pipeline plays a key role in connecting Libyan gas fields directly to Sicily.

What are the main sources of electricity in Libya?

The primary fuel sources for electricity generation in Libya are natural gas, accounting for 67%, and oil, contributing 33%. Diesel and fuel oil are the main petroleum sources utilized in power plants, although facilities located at oil fields sometimes turn to crude oil when imported refined products are unavailable.

How did energy consumption change in Libya?

Domestic energy consumption in Libya was likely driven by industry and population growth. During this period, according to the International Energy Agency, the world population grew 5.3%, and the Libyan population grew 9.4%.
