Costa Rica has a strong focus on renewable energy, with 99.78% of the energy output coming from renewable sources in 2020. However, solar power currently accounts for less than 1% of the country's energy production. In November 2021, Costa Rica approved a bill that allows individuals to produce their own renewable electricity and sell their surplus energy.

Comprising a total of 17% of renewable energy production, wind power has become another reliable source of

energy in Costa Rica. 3. Geothermal Energy. Costa Rica has the added benefit of being able to produce a fair amount of geothermal energy due to dozens of active and inactive volcanoes that can be found throughout the region. Geothermal ...

The origin of eco-lodges also stems from Costa Rica. The first-ever eco-lodge, Rara Avis (also on this list) was established in the 1980s. And you'll find that in addition to these eco-lodges, most Costa Rican hotels are also going eco-friendly, which only proves how great the country is in its effort to preserve the environment.

In the context of Costa Rica, these outcome conforms with findings of Asif et al. [60], Li et al. [61], and Yasmin and Bibi [62] which highlight that while corruption can lead to short-term environmental degradation, Costa Rica's strong governance and environmental policies help mitigate these effects over time, reducing the long-term ...

Costa Rica's green energy miracle is at a critical juncture. According to the National Electricity Control Center, Costa Rica's renewable energy generation decreased from 99% in 2021 to 98% in 2022. It is estimated to be between 92% and 95% in 2023. This decline is primarily due to a drought, as 67% of the country's renewable energy comes ...
