

Can a hierarchical porous hybrid film harvest solar energy for generation?

Here, we present a hierarchical porous hybrid film composed of nanofibres of cellulose on which conductive metal-organic frameworks have been layered to enable photothermal conversion and regulation of ion transport that can harvest solar energy for generation of electricity.

Is a freestanding hybrid film suitable for solar power generation?

Solar energy fits well with the increasing demand for clean sustainable energy. This paper describes a freestanding hybrid film composed of a conductive metal-organic framework layered on cellulose nanofibres which enables efficient solar power generation.

What is China's first large-scale molten salt energy storage thermal power station?

Development status of solar thermal power generation technology. Energy Environ. 2012;110(1):90-92. [Google Scholar]

Can concentrating solar power systems generate electricity in Thailand?

Janjai S, Laksanaboonsong J, Seesaard T. Potential application of concentrating solar power systems for the generation of electricity in Thailand. Appl Energy. 2011;88(12):4960-4967. doi: 10.1016/j.apenergy.2011.06.044.

Which solar-powered clean water production system has the highest Vaporization Enthalpy?

Taking the benefits of the efficient vaporization enthalpy recycling, the PV-MD5 system achieved the maximum clean water production rate of 11.6 kg m⁻² day⁻¹, positioning it among the best-performing solar-powered clean water production systems without additional energy input (Fig. 7 f and Table S5).

Who is Xiaofeng Xu?

Prof. Xiaofeng Xu received his Ph.D. from State Key Laboratory of Luminescent Materials & Devices, South China University of Technology in 2011. During 2011-2014, he was a research fellow at Nanyang Technological University, Singapore. During 2014-2017, he worked as a post-doc at Chalmers University of Technology, Sweden.
