

The energy consumed by buildings produces a third of Monaco's greenhouse gas emissions. Building insulation External thermal insulation allows for continuous, high-performance insulation and reduces thermal bridging without loss of living space.

MonaCube, the Efficient Building Use Competition, is an initiative aimed at encouraging both public and private sector companies within the Principality to accelerate the adoption of energy-saving technologies and practices.

“M.E.R. aims to make Monaco one of the first States to have 100% green electricity production capacity, equivalent to consumption in its territory,” stated Marie-Pierre Gramaglia, Minister of Public Works, the Environment and Urban Development.

There are essentially three methods for thermal energy storage: chemical, latent, and sensible [14] emical storage, despite its potential benefits associated to high energy ...

External thermal insulation is a construction process which is rapidly growing in popularity. It is a process which makes sense since, in both new-build and renovation projects, it allows for continuous, high-performance insulation and reduces thermal bridging.

On 23 October 2018, the Prince's Government launched the Bâtiments Durables Méditerranéens de Monaco (Sustainable Mediterranean Buildings of Monaco, BD2M) initiative in partnership with EnvirobatBDM.

Oil and gas gathering and transportation pipelines are widely used in oil field production, and the safe and stable transportation of pipelines plays a crucial role in energy ...

On 23 October 2018, the Prince's Government launched the Bâtiments Durables Méditerranéens de Monaco (Sustainable Mediterranean Buildings of Monaco, BD2M) initiative in partnership ...

“M.E.R. aims to make Monaco one of the first States to have 100% green electricity production capacity, equivalent to consumption in its territory,” stated Marie-Pierre Gramaglia, Minister of ...

Its space saving qualities also remain a strong argument, particularly for small areas (the volumes do not change since the insulation is installed externally). The financial aspect is another advantage which should not be ignored: the energy savings that can be achieved through external insulation are very attractive over time.

# Monaco insulation and energy storage

Long-duration energy storage (LDES) will be required to balance intermittent renewable energy supply with daily, weekly, and even seasonal supply changes. At these timescales, traditional ...

A giant solar power station has been inaugurated on the roof of Monaco's Grimaldi Forum, marking a significant milestone in the Principality's energy transition. Eventually, electricity generated from the station will be used to power the new eco-district.

Sustainable energy storage with Magnetite Sustainable and efficient use of energy is a very actual and important topic. The mineral magnetite ( $\text{Fe}_3\text{O}_4$ ) contributes to this challenge as it can ...

In addition to this approach, H.S.H. the Sovereign Prince has decided to create the Energy Transition Mission to manage projects to limit greenhouse gas emissions and develop renewable energies. This Mission manages the National Green Fund, in order to carry out practical, large-scale projects, in line with the objectives set.

As thermal energy storage (TES) technologies gain more significance in the global energy market, there is an increasing demand to improve their energy efficiency and, ...

These new regulations supplement the numerous tools that the Prince's Government has put in place to support those involved in Monaco's energy transition. Marie-Pierre Gramaglia reiterated the aim of the new regulations: achieving the Principality's targets for reducing greenhouse gas emissions.
