

At Solar Panels Network, we make solar panel installation in Jersey an attractive process without compromising on its efficiency. All of the providers in our network have been thoroughly researched and vetted to ensure that they deliver the best design, installation, and services.

Solar thermal is ideal for providing heat for swimming pools. By harnessing the sun a thermal system can provide 80% of your pool's annual heating needs and can be installed to complement the majority of existing heating systems or to heat the pool independently.

Solar PV just provides onsite renewable electricity so you still need an appliance to do the actual heating such as panel radiators or Air Source Heat pump. Solar PV is not well suited to providing electricity to heating appliances, which typically operate when it's cold and dark October & March (when solar is at its least productive)

Solar electricity is green renewable energy and doesn't release any harmful carbon dioxide or other pollutants. A typical home solar PV system could save over a tonne and a half of carbon dioxide per year - that's more than 30 tonnes over its lifetime.

Our engineers can design, install and commission solar panel arrays that incorporate the latest advancements in solar technology and efficiency. Our systems are suitable for most roof types, generally do not require planning permission and payback the cost of installation in 8-10 years.

Our solar power systems are designed to integrate seamlessly into your home, and we offer a variety of panel options to suit your aesthetic preferences. By installing a solar PV system, you can significantly reduce your energy bills and lower your carbon footprint.

Turn your home into an energy saving asset with Solar PV Technology. Solar Photovoltaic (PV) provides extra on-site electricity, ensuring your regular connection to the power grid. Daylight powers your panels, offsetting grid electricity purchases, saving you money.

Solar PV explained. Solar photovoltaic (PV) systems are made up of panels that fit on top of your roof, but you can also install them on the ground or fit solar tiles. Solar PV cells are made from layers of semi-conducting material, usually silicon. When sunlight shines on the panels or tiles, electrons create a flow of electricity.

Produce your own energy, save money & reduce your carbon footprint with Sunworks - Jersey's first dedicated energy optimisation provider. With over 550 local solar installations we are the trusted choice for homeowners and businesses wanting to invest in the future.
