

Photovoltaic inverter connected to electric meter

How do you connect a solar inverter to a utility meter?

A junction box is added between the utility meter and the main service panel. Then the wires from the utility meter, the main breaker panel, and the PV solar are connected in the junction box. An adequately sized PV service disconnect box must be used prior to making the connection between the junction box and the solar inverter.

What type of inverter do I need for a mains-connected PV system?

Inverters for mains-connected PV systems should be type approved to the Energy Networks Association's Engineering Recommendation G83/1 (for systems up to 16 A). NICEIC operates a Microgeneration Certification Scheme (MCS) which covers the design installation and testing of environmental technology installation work associated with dwellings.

What is a PV inverter?

The inverter is a key component of the PV system and is usually installed near the main electrical panel. It must be easily accessible for maintenance and monitoring.

Can a photovoltaic inverter convert a solar panel?

If the conversion of the power produced by the solar panels is done by more than one photovoltaic inverter, it is recommended that the output of those inverters be grouped by connecting them to a secondary LV switchboard, which is then connected to the main LV switchboard at a single point.

What is a solar inverter?

In any grid-tied solar power project, the inverter is the system's heart. It is vital to be clear about the technical characteristics: The power accumulated by the number of inverters will determine the nominal capacity of the solar power plant in any PV system connected to the grid.

What is a grid connected PV system?

Grid connected PV systems always have a connection to the public electricity grid via a suitable inverter because a photovoltaic panel or array (multiple PV panels) only deliver DC power. As well as the solar panels, the additional components that make up a grid connected PV system compared to a stand alone PV system are:

There are two basic approaches to connecting a grid-tied solar panel system, as shown in the wiring diagrams below. The most common is a "LOAD SIDE" connection, made AFTER the main breaker. The alternative is a "LINE OR ...
