

Photovoltaic panels make canopy leaking

Can solar panels cause a roof to leak?

The installation of solar panels on your roof can be an exciting time as it means you will be cutting down your energy costs considerably, but doing this will involve drilling holes in your roof, which could beg the question of whether this will cause your roof to leak? There are various reasons your roof could leak after installing solar panels.

Do solar panels cause roofs to leak?

Solar panels rarely cause roof leaks. When roof leaks occur after solar panel installation, they usually become evident within the first year.

How do I fix a roof leak after installing solar panels?

If you're experiencing roof leaks after installing solar panels, contact a professional roofing contractor who specializes in solar panel installations for a thorough inspection. They can identify the source of the leaks and recommend appropriate solutions.

Can solar panels be installed on a roof?

Most modern roofs are compatible and able to withstand the installation of solar panels, but in some cases, the roof material is susceptible to leaks. If your roof is made from clay, terracotta, wood shingles, or slate, there is an increased risk of leaks developing through the installation.

How do I know if my solar panel is leaking?

Detecting a roof leak under solar panels may not always be straightforward, but there are several signs that can indicate a problem. Keep an eye out for the following signs: Water stains or discoloration: Look for water stains on the ceiling or walls near the solar panel installation. These stains may appear as dark spots or patches.

Can a solar roof damage a house?

Installing solar panels on roofs that are over thirty years old can cause damage due to existing deterioration in the plywood or rafters under the roof. The added stress from the solar installation can make these weak spots more prone to leaks, causing further damage.
