

Who regulates the energy sector in Kosovo?

Regulation of activities in energy sector in Kosovo is a responsibility of the Energy Regulatory Office (ERO). An additional factor in the energy sector in Kosovo is Ministry of Economic Development (MZHE), which has the responsibility of dealing with issues that have to do with energy. MZHE prepares legislation and drafts strategies and projects.

Which companies are affecting the energy sector in Kosovo?

Besides government institutions, there are also companies with great impact in energy sector such as Kosovo Energy Corporation (KEK), Transmission, System and Market Operator (KOSTT) and Kosovo Electricity Distribution and Supply (KEDS). A lot of legislative documents that aim the adjustment of electricity sector have been approved.

How inherited issues have affected the energy sector in Kosovo?

The inherited issues after the war in Kosovo and the transition period have had an immense effect on the progress of this sector. Regulation of activities in energy sector in Kosovo is a responsibility of the Energy Regulatory Office (ERO).

How did Kosovo get its own energy system?

Kosovo was part of the Regional Energy Community and was connected with the regional system through interconnections with Serbia, North Macedonia, Montenegro and Albania. KOSTT made an agreement with ENTSO-Eso Kosovo gets his own independent region of energy administration. Kosovo gets full independence and control of its energy industry.

Why is electricity expensive in Kosovo?

Usually, in Kosovo the imported energy is much more expensive than export. This is because Kosovo imports energy one day before needed, in the other hand energy is exported during the night when the demands are under generating level. Imports and exports have a negative impact for electrical energy price.

What is the energy strategy for Kosovo?

The Kosovo energy strategy includes increasing RES capacity to 35% of electricity consumption by 2031. Aiming for 600 MW wind, 600 MW solar PV, 20 MW biomass & at least 100 MW of prosumer capacity, to reach a total installed RES capacity of 1600 MW by 2031. Lignite exploitation in Kosovo started in 1922.

Kosovo's recent Energy Strategy sets an ambitious vision to achieving a just energy transition for the country between 2022-2031. The main pillar of the Strategy is to accelerate renewable deployment, focused on utility-scale wind and solar PV. Kosovo plans to integrate 1200 MW of RES over the next 10-years. 100 MW Solar Engineering, P ...

Reaktor off grid Kosovo

Balancing the grid: Kosovo would benefit from additional investment in interconnection and micro-renewables as a cost-effective way to deliver at least an additional 1,000 GWh annually by 2030. o Expanded interconnection: In early 2020, Kosovo struck a deal with the association of European grid operators to connect with the continental

In 2024, Kosovo has made some steps towards a more sustainable energy grid already. Two years ago, Kosovo opened its biggest wind farm. The Selac Wind Farm has 27 turbines and provides electricity for around 10% of Kosovars.

Strong performance by Kosovo's first large-scale wind and solar farms show the coal-dominated, Western Balkan country can exploit falling renewables costs and green lending appetite to align better with a low-carbon European transition and reduce losses from stranded fossil fuel assets.

developing states such as Kosovo. The key vulnerability of Kosovo's energy sys-tem is the vast reliance on the two old lignite-fired thermal power plants for gen-eration. Thus, this high reliance on lignite power plants makes the energy system unflexible, leading to unstable security of supply, unreliable, and dependent on

In Kosovo, coal-fired power plants dominate electricity production, highlighting the need for cleaner alternatives. Worldwide efforts are underway to increase the efficiency of photovoltaic systems using sustainable materials, essential for ecological and human health.

Until 2020, Kosovo promoted renewable energy in the electricity sector using a feed-in tariff, which was suspended by the ERO due to the cost-efficiency of competitive support mechanisms. Kosovo is now developing a legal framework to introduce more effective and transparent schemes, like auctions, to advance renewable energy growth. [6]

In 2024, Kosovo has made some steps towards a more sustainable energy grid already. Two years ago, Kosovo opened its biggest wind farm. The Selac Wind Farm has 27 turbines and provides electricity for around ...

A full assessment of the trade-offs of the energy opportunities in Kosovo must take into account energy security, cost, public and environmental health, and job creation. As a baseline, consider two views of Kosovo's energy future: a business-as-usual scenario and a low-carbon, sustainable energy future that was analyzed by Kammen and colleagues.

Energy Regulatory Office (ERO) is an independent company which sets the regulatory framework founded on the principals of free trade. The energy price is determined by different factors: operative cost, maintenance cost, import and other factors. The decrease of commercial and technical losses would affect positively. Factors that have kept the low prizes until now are: foreign investments as grants, government subventions, the lack of investments for environment ...
