

The European Commission has approved a EUR350 million (\$380.4 million) funding package to support companies in Portugal that produce solar panels, batteries, heat pumps, and other renewable...

Portugal has been able to attract major foreign players that produce equipments and components for the renewable energy sector (wind turbines, generators, molds and others). This growth mirrors the country's competitiveness and attractiveness in the sector, the nearshoring effect ...

Portugal's transformation is more than just about energy production; it's a narrative of resilience, innovation, and community spirit. As the country forges ahead, its commitment to renewable energy serves as a ...

Renewable power sources supplied 61% of Portugal's electricity in 2023, up from 49% a year earlier, hitting a new record thanks to periods of heavy rains, strong winds and good doses of sunshine...

Across the globe, manufacturers are increasingly developing new ways of using renewable energy to strengthen clean energy competitiveness in various industries.. Process heating systems are critical to the global manufacturing industry's ability to turn raw materials (such as oil, iron ore, trees, crops, etc.) into products (including plastics, metals, paper and food).

Portugal's renewable electricity production from 1980 until 2019. Renewable energy in Portugal was the source for 25.7% of total energy consumption in 2013. [1] In 2014, 27% of Portugal's energy needs were supplied by renewable sources. [2]

Portugal has been able to attract major foreign players that produce equipments and components for the renewable energy sector (wind turbines, generators, molds and others). This growth mirrors the country's competitiveness and attractiveness in the sector, the nearshoring effect of European supply chains, highly skilled workforce and EU's ...

“We are proud to once again be pioneers in Portugal and commission the country's second hybrid park, harnessing the wind and sun of the region to increase the consumption of renewable energy. This project is part of EDP's strategy to continue accelerating the national energy transition, whether by investing in new renewable projects or ...

Portugal's transformation is more than just about energy production; it's a narrative of resilience, innovation, and community spirit. As the country forges ahead, its commitment to renewable energy serves as a powerful reminder that a brighter, greener future is possible, and it begins with each of us.

In Portugal, the primary regulators for energy activities (including renewable energy) are as follows. The Ministry of the Environment and Energy Transition, the mission of which is to formulate, conduct, implement and evaluate policies on the environment, spatial planning, cities, housing, urban, suburban and road passenger transport, climate, nature conservation and ...

Portugal continues to be a global leader in renewable energy production. A well-structured incentive mechanism and the adoption of ambitious targets helped this sector grow over the last couple of years. Portugal's new ambitious national energy and climate plan for 2030 and roadmap to carbon neutrality by 2050 targets at least 80% of ...

CO 2-neutral production process being tested in mega-plant in Lousado, Portugal with a production capacity of more than 18 million tires per year; An innovative electric boiler can generate steam from green electricity instead of gas; By 2040 at the latest, Continental wants to switch production in all tire plants to CO 2-neutral; Dr. Bernhard Trilken, Head of ...

Portugal is solidifying its position as a European leader in renewable energy, making significant strides toward a greener future. In 2023, renewable sources accounted for 61% of the country's electricity consumption, a remarkable achievement driven by favorable weather conditions, technological advancements, and heavy investments in wind, water, solar, and ...

This year, the accumulated production of this renewable energy represents 27% of national consumption, while solar energy contributed around 10%. Furthermore, the high availability of renewable energy sources in both Portugal and Spain also led to the highest ever use of hydroelectric pumping in Portugal on the same day, with a total of 41.7 GWh.

Portugal is solidifying its position as a European leader in renewable energy, making significant strides toward a greener future. In 2023, renewable sources accounted for 61% of the country's electricity consumption, a remarkable achievement driven by favorable weather conditions, technological advancements, and heavy investments in wind ...

In 2023, Portugal consumed 31.2 terawatt-hours (TWh) of renewable energy. This figure may not seem immediately clear, but it gains significance when considering that renewables accounted for 61 per cent of the country's electricity consumption. In other words, a substantial proportion of energy comes from renewable sources.
