How does solar metering work?

When you install solar, the original meter gets replaced with a bi-directional (or 'Buy/Sell') meter. This bi-directional meter is what makes net metering possible by measuring solar energy production as well as any electricity that you are also buying from the utility company.

What is a production meter?

Production meter: A meter that is installed at the inverter output or site AC connection, and measures the energy/power produced by the PV system or site. In a single inverter system, the meter is connected directly to an RS485 port of the inverter. The meter is connected to an RS485 port of one of the inverters.

What is a site production meter?

Site production meter: A meter that is installed at a SolarEdge inverter output, and reads the energy produced by all the inverters at the site. Site limit: The power level (in kW) that the inverter falls back to once an export limit event is triggered. Wye: In a Wye ('Y') configuration, all three phases are connected at a single neutral point.

What is a SolarEdge energy meter?

Enabling production, consumption, or import/export monitoring, and for import/export limitation. Suitable for Residential and Commercial Installations. Easy to install, SolarEdge's Energy Meter is also compatible with a wide selection of current transformers from 50A and higher\*.

How does a solar energy system work?

When you install a solar energy system, you gain a few additional components on the side of your home or business. The Inverter, the AC Disconnect, the Production Meter, the Service Panel and the Bi-Directional meter all work together on your new system. Below are some commonly asked questions on how they work:

- 1.

What is a solar energy meter with Modbus connection?

Delta: In a Delta configuration, the three phases are connected in a triangle. Delta systems utilize four wires - three hot and one ground. The SolarEdge Energy Meter with Modbus Connection (also referred to as "the meter") enables measuring the power and energy of the photovoltaic (PV) system.
