

Sun power investment New Zealand

Are solar power systems a good investment in New Zealand?

A solar power system has a high return on investment (ROI), and is an attractive investment, offering much more than bank term deposits or similar investments. A grid-connected solar power system in New Zealand can achieve an ROI between 10% and 18%. Find out how much you can expect to save on our solar calculator [here](#).

How much solar energy does a home generate in New Zealand?

From using the solar calculator, the estimated annual solar generation can be found for any home in New Zealand. Using the example of a 5kW solar power system on a 20-degree, north-facing roof on a home in Grey Lynn, Auckland, the solar power system will generate 7,030kWh of solar energy in a year.

Is solar power a good investment?

Ultimately a solar power system is designed with the idea of exporting only a small amount of power to the grid. The ratio of using solar power directly rather than it being exported is known as a self-consumption rate. A solar self-consumption rate above 50% is great, and will lead to good investment returns.

How many investment projects are there in New Zealand?

There is also a list of 145 investment projects which have been publicly announced (as at June 2024), with information on each project's status. Projects range in size from 1MW to 1000MW and are predominantly wind and solar, but also geothermal, hydro and battery. They are geographically spread, but mostly in the North Island to match demand.

Thinking of investing in solar power? Before you make any decisions, it's crucial to do your research. In this hub, we delve into the key considerations and due diligence needed when considering solar power, helping you make an informed decision about your energy future.

A Crown-owned investment vehicle is putting \$78 million towards new solar, hoping to boost renewable electricity generation.
