

Switzerland's energy relies mainly on hydroelectric, nuclear, and natural gas, as well as imported petroleum for cars since Switzerland produces no fossil fuels. Launched in 2011, the 2050 Energy Strategy aims to shift towards sustainable energy practices, achieving climate neutrality and reducing reliance on fossil fuels.

6 ???· New patents to integrate artificial intelligence into power grids have grown sixfold in recent years, with the United States and China leading the way in AI for smart grid development, according to a new study by the European Patent Office (EPO) and the International Energy Agency (IEA).. The report, Patents for Enhanced Electricity Grids, shows how patents for ...

The following trends underscore the dynamic and evolving M& A environment in Switzerland's energy and infrastructure sectors, driven by sustainability goals, technological advancements and strategic investments. The drive towards renewable energy sources and decarbonisation remains a central theme.

Switzerland's current electricity mix is very low in CO2 emissions. This is due to the high share of hydropower, which accounts for about 40% of domestic electricity production. Increased electrification of future energy consumption is expected to significantly increase the electricity demand - which should ideally be low carbon.
