What is solar cooking & how does it work?

Solar cooking is simply harnessing the sun's energy to cook food. This is an excellent way to keep the house cool in the summer, costs nothing to use, and is a great alternative to conventional cooking. 1. Solar Cooker - you can make your own (see below) or buy a unit that's ready to go like the Sun Oven. 2.

Can you cook food in a solar cooker?

Absolutely! Almost any food that you can cook in a conventional oven or slow cooker can be cooked in a solar cooker. However, some foods are better suited to solar cooking than others. Foods that cook with moist heat, like stews and soups, work well because the solar cooker naturally traps steam.

How do you cook with a solar oven?

One of the tricks to successful solar cooking is managing the temperature. Unlike traditional ovens, where you set a precise temperature, solar cooking requires a bit of flexibility. Here's how you can control it: Adjust the cooker's orientation to the sun for higher or lower heat. Use reflectors to intensify the sunlight on cloudy days.

How to choose a solar cooker?

Opt for pots and pans with dark exteriors and close-fitting lids to maximize heat absorption and retention. Cooking Bags: For certain solar cooker models, transparent cooking bags can be essential. They trap heat around the pot, speeding up the cooking process. Thermometer: To monitor cooking temperatures.

How long does a solar cooker take to cook?

The cooking time in a solar cooker can vary based on the type of food, the type of cooker, and the intensity of the sunlight. As a general rule, solar cooking takes about twice as long as conventional cooking. So if a dish typically takes an hour in the oven, plan for about two hours in the solar cooker.

Can solar cooking improve cooking efficiency & convenience?
