What is a lithium ion battery?

A lithium-ion or Li-ion battery is a type of rechargeable battery that uses the reversible intercalation of Li⁺ ions into electronically conducting solids to store energy.

Which lithium ion battery is best for stationary energy storage?

As of 2023, LiFePO₄ is the primary candidate for large-scale use of lithium-ion batteries for stationary energy storage (rather than electric vehicles) due to its low cost, excellent safety, and high cycle durability. For example, Sony Fortelion batteries have retained 74% of their capacity after 8000 cycles with 100% discharge.

Are lithium-ion batteries a viable energy storage solution?

Lithium-ion batteries were developed by a British scientist in the 1970s and were first used commercially by Sony in 1991, for the company's handheld video recorder. While they're currently the most economically viable energy storage solution, there are a number of other technologies for battery storage currently being developed.

What is battery storage?

Battery storage is a technology that enables power system operators and utilities to store energy for later use.

What is the largest lithium-ion battery installation in the world?

One example is the Hornsdale Power Reserve, a 100 MW/129 MWh lithium-ion battery installation, the largest lithium-ion BESS in the world, which has been in operation in South Australia since December 2017. The Hornsdale Power Reserve provides two distinct services: 1) energy arbitrage; and 2) contingency spinning reserve.

Why are lithium ion batteries better than other batteries?

Lithium-ion batteries have higher voltage than other types of batteries, meaning they can store more energy and discharge more power for high-energy uses like driving a car at high speeds or providing emergency backup power. Charging and recharging a battery wears it out, but lithium-ion batteries are also long-lasting.
