Data from ESA's Solar Orbiter and NASA 's Parker Solar Probe have revealed that large fluctuations in the Sun's magnetic field, specifically Alfvén waves, are key to powering and accelerating the solar wind. This discovery sheds light on the dynamics of solar phenomena and suggests potential similarities in other stars' winds.

Moldova Solar este amprenta inova?iei ?i a standardelor &#238;nalte &#238;nc? din 2014 c&#226;nd a fost creat? prima companie din grup, ca o afacere de familie, iar de atunci compania a crescut exponen?ial, devenind un grup de 4 companii cu linii de produc?ie diferite. Producem cu energie verde &#238;n fiecare companie, cu responsabilitate pentru mediul ...

Alfvén waves are found to be ubiquitous in the solar wind. Recent progress in observational studies of the waves is reviewed to formulate a microscopic picture for the Alfvénic fluctuations. The main aspects of the observational properties of these waves, including the wave intervals, propagation, evolution, origin and generation, are presented.

Regarding the Republic of Moldova, several studies on wind resources availability have been reported, with the goal to evaluate the renewable energy potential, [4], [5].As the wind energy become more present into the general energy map (Fig. 2 a), new methods were necessary in order to assess the efficiency of investments into wind farms.As consequence, ...

Alfvén waves are transverse magnetohydrodynamic waves that travel along the magnetic field and are thought to play a role in the processes that heat the solar wind (3, 7, 8). The energy budget of the solar wind indicates that energy provided by Alfvén waves makes a greater contribution to stream acceleration at higher solar wind speeds (). The acceleration of the solar ...
